

u[sonic] ULTRASONIC WIND SENSOR

Seawater resistant and perfectly heated

The combined ultrasonic sensor u[sonic] for wind direction and wind speed. The seawater resistant sensor is perfectly heated and ideal for use under cold climate conditions. The equipment is connected by an 8 pole screw connector. The measured values can be requested over a variety of interfaces.

- Meets the requirements for meteorological measurements according to WMO
- No moving measuring elements, no wear
- Two parameters measurable
- intelligent heating depending on wind speed and wind direction
- Easy to install, very service friendly

APPLICATIONS

- Professional meteorological application
- Wind turbines on- and offshore
- Ship weather station
- Building automation
- Traffic and industrial meteorology
- Wind warning
